

PETE ROSE, INC. IS PART OF A GREEN INDUSTRY...

Landscaping products such as natural stone, gravel, compost, trees, and other plants are key components of the green philosophy. *Stone is natural, durable and has good thermal mass – the ability to store & slowly release heat impacting indoor air temperature and thus increasing energy efficiency. Trees store carbon and produce oxygen; when placed around a building they provide shade in the summer and block cold winter winds, thus saving energy.

Natural stone and aggregates can be used and reused without negatively affecting the environment in the least. Use them to facilitate drainage and decrease or eliminate erosion. Build small retaining walls to frame flower beds and vegetable gardens. Plants not only brighten things up with color, they also return oxygen to the air. And you won't waste fuel going to the store for fresh vegetables or a flower arrangement.

Vendors for our decorative stone, mulch, aggregates and compost are located within a few hundred miles of our facility. The materials are natural products of the earth and are used once again to beautify the land. Our sister company, the Glen Allen Nursery, has a huge selection of trees, shrubs and flowers. You're certain to find whatever you need for a variety of projects that will keep our air and water clean while *naturally* beautifying our homes and yards.
